- ▶ De- and recomposition of expression in music performance

Expression in music

- ▶ tension, emotions, moods

Expression in music

- ▶ tension, emotions, moods
- ▶ composer writes and gives directions in score

Expression in music

- ▶ tension, emotions, moods
- ▶ composer writes and gives directions in score
- ▶ musician interprets and **performs**

Expression in music

- ▶ tension, emotions, moods
- ▶ composer writes and gives directions in score
- ▶ musician interprets and **performs**
- ▶ tools: dynamics, harmonies, ornaments, **timing**

Expression in music

- ▶ tension, emotions, moods
- ▶ composer writes and gives directions in score
- ▶ musician interprets and **performs**
- ▶ tools: dynamics, harmonies, ornaments, **timing**
- ▶ similar to someone reading aloud a poem

Expression and structure

- ▶ poems, literature: written words, sentences with structure, meter, questions, answers

Expression and structure

- ▶ poems, literature: written words, sentences with structure, meter, questions, answers
- ▶ music scores: phrase structures (melody), bars, ritards

Aims of research

- ▶ Analyze expressive timing in terms of structure

Aims of research

- ▶ Analyze expressive timing in terms of structure
- ▶ Draw quantitative conclusions

Aims of research

- ▶ Analyze expressive timing in terms of structure
- ▶ Draw quantitative conclusions
- ▶ Edit expressive timing

Structure in music

Beethoven's Paisiello theme

Figure 1

The image displays a musical score for Beethoven's Paisiello theme, consisting of three systems of piano notation. Each system includes a treble clef staff and a bass clef staff. The key signature is one sharp (F#) and the time signature is 3/8. The first system contains measures 1 through 6. The second system contains measures 7 through 13. The third system contains measures 14 through 20. The score features various musical notations such as notes, rests, and fingerings, with some measures containing multi-measure rests.

Structure in music

compare phrases with singing a melody in one breath

Structure in music

some structural units are very piece specific

12-phrase

48-phrase

leap

ritard

Structure in music

36-phrase

chord-ritard

Expressive timing diagram

Note that performer does not play at constant tempo

Expressive timing diagram

- ▶ Basic time unit: eighth note duration
- ▶ Score time vs Performance tempo
- ▶ Subtle deviations from global tempo
- ▶ Expressed as seconds per time unit
- ▶ **Inverse** local tempo: line going up means slower

Expressive timing diagram

Note that performer does not play at constant tempo

Questions

Approach

- ▶ Specific piece of music as starting point

Approach

- ▶ Specific piece of music as starting point
- ▶ Piece specific model based on musical structure and expectations/intuition

Approach

- ▶ Specific piece of music as starting point
- ▶ Piece specific model based on musical structure and expectations/intuition
- ▶ Assumption: expressive signal can be decomposed into separate timing profiles

Approach

- ▶ Specific piece of music as starting point
- ▶ Piece specific model based on musical structure and expectations/intuition
- ▶ Assumption: expressive signal can be decomposed into separate timing profiles
- ▶ One timing profile per structural category

Approach

- ▶ Specific piece of music as starting point
- ▶ Piece specific model based on musical structure and expectations/intuition
- ▶ Assumption: expressive signal can be decomposed into separate timing profiles
- ▶ One timing profile per structural category
- ▶ Timing profile motive repeats where structural units repeat

Approach

- ▶ Specific piece of music as starting point
- ▶ Piece specific model based on musical structure and expectations/intuition
- ▶ Assumption: expressive signal can be decomposed into separate timing profiles
- ▶ One timing profile per structural category
- ▶ Timing profile motive repeats where structural units repeat
- ▶ Simple model: linear shapes for going up and down in tempo

Expressive timing signal decomposed into profiles

Description of profiles

- ▶ Intuition, trial and error

Description of profiles

- ▶ Intuition, trial and error
- ▶ Found plausible in previous research

Description of profiles

- ▶ Intuition, trial and error
- ▶ Found plausible in previous research
- ▶ Linear profiles with breakpoints for going up and down in tempo

Description of profiles

- ▶ Intuition, trial and error
- ▶ Found plausible in previous research
- ▶ Linear profiles with breakpoints for going up and down in tempo
- ▶ Vertical position of breakpoints decided by observation from performance

Profile descriptions

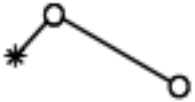

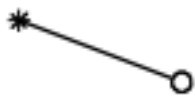

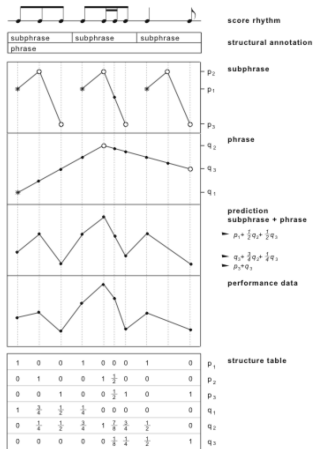

Structural unit	profile shape
36-phrase	
3-phrase	
chord ritard (8 notes)	

Table: Structural units and their profile descriptions

Procedure

Procedure

Modelled as multiple linear regression problem:

$$\begin{pmatrix} 1 & 1 \\ 2 & 0 \\ 3 & 0 \end{pmatrix} \begin{pmatrix} ?_1 \\ ?_2 \end{pmatrix} = \begin{pmatrix} 1.5 \\ 2.5 \\ 3 \end{pmatrix}$$

Find optimal $?_1$ and $?_1$, such that error between optimal solution and observed data is minimized.

Procedure

Modelled as multiple linear regression problem:

$$\begin{pmatrix} 1 & 1 \\ 2 & 0 \\ 3 & 0 \end{pmatrix} \begin{pmatrix} 1.08 \\ 0.42 \end{pmatrix} = \begin{pmatrix} 1.5 \\ 2.15 \\ 3.23 \end{pmatrix}$$

Error (sum squared differences) here is

$$(1.5 - 1.5)^2 + (2.5 - 2.15)^2 + (3 - 3.23)^2 = 0.175$$

Procedure

Voici

Figure 5

Use of results

- ▶ Statistical, quantitative analyses
- ▶ Edit expression

Example of quantitative analysis

Structural unit	Stepwise r^2
chord ritard	0.786
3-phrase	0.456
12 phrase	0.181
ritard	0.173
bar	0.153
36-phrase	0.166
leap	0.107
48-phrase	0.075
Full model	0.948

Table: Explained variance of individual timing profiles of performance at 57 BPM

Another example of quantitative analysis

Structural unit	Stepwise r^2
chord-ritard	0.687
3-phrase	0.238
36-phrase	0.147
bar	0.103
ritard	0.094
48-phrase	0.04
12-phrase	0.027
leap	0.012
Full model	0.837

Table: Explained variance of individual timing profiles of performance at 50 BPM

Introduction

Decomposition

Recomposition

Conclusions

Questions

Why?

- ▶ Aim: edit expression in music performances
- ▶ Contrasts to brute force methods of music performance editing

Recomposition

Three steps:

- ▶ Recombine timing profiles with amplified with weights

Recomposition

Three steps:

- ▶ Recombine timing profiles with amplified with weights
- ▶ Build performance around it

Weights

- ▶ Control contribution of separate timing profiles

Weights

- ▶ Control contribution of separate timing profiles
- ▶ Some units can influence length: leap, ritard, chord ritard

Weights

- ▶ Control contribution of separate timing profiles
- ▶ Some units can influence length: leap, ritard, chord ritard
- ▶ Others are normalized to keep performance length same

Weights

- ▶ Weight = 1: copy performance expression

Weights

- ▶ Weight = 1: copy performance expression
- ▶ Weight = 0: mute performance expression

Weights

- ▶ Weight = 1: copy performance expression
- ▶ Weight = 0: mute performance expression
- ▶ Negative weight: turn profile upside down

Weights

- ▶ Weight = 1: copy performance expression
- ▶ Weight = 0: mute performance expression
- ▶ Negative weight: turn profile upside down
- ▶ Absolute weight > 1 : exaggeration

Weights

- ▶ Weight = 1: copy performance expression
- ▶ Weight = 0: mute performance expression
- ▶ Negative weight: turn profile upside down
- ▶ Absolute weight > 1 : exaggeration
- ▶ Absolute weight < 1 : understatement

Switch to demo

Let's have another listen...

Reconstruct performance

New expressive timing pattern...

- ▶ Only onsets of one note per time unit!

Only 'main' notes in the analysis

Beethoven's Paisiello theme

Figure 1

The image displays a musical score for Beethoven's Paisiello theme, consisting of three systems of music. Each system includes a treble clef staff and a bass clef staff. The key signature is one sharp (F#) and the time signature is 3/8. The score is annotated with various performance markings: fingerings (1-5) and accents (^). The first system covers measures 1-6, the second system covers measures 7-13, and the third system covers measures 14-19. The music is written in a simple, melodic style characteristic of the early Classical period.

Reconstruct performance

New expressive timing pattern...

- ▶ Only onsets of one note per time unit!
- ▶ other notes: asynchrony with 'main' notes

Reconstruct performance

New expressive timing pattern...

- ▶ Only onsets of one note per time unit!
- ▶ other notes: asynchrony with 'main' notes
- ▶ intensity (volume): copy from original performance

Reconstruct performance

New expressive timing pattern...

- ▶ Only onsets of one note per time unit!
- ▶ other notes: asynchrony with 'main' notes
- ▶ intensity (volume): copy from original performance
- ▶ durations? articulation consistency!

Articulation

- ▶ Recipes for three different transitions
- ▶ Legato: keep overlapping duration the same

Articulation: legato

Outline

Introduction

Decomposition

Recomposition

Conclusions

Questions

Conclusions

- ▶ Decomposition of expressive timing by linear profiles is very reasonable approach (correlation of 95% !)
- ▶ Quantitative analysis of music performance: comparison of structural units, performers, speeds
- ▶ Recomposition: provides evidence for plausibility of decomposition method
- ▶ Recomposition enables to edit expression in meaningful way
- ▶ Stimuli for perceptual experiments, studio editing

Further research

- ▶ Derivation of score from performance (quantization)
- ▶ Automatic recognition of structure and generation of profile description
- ▶ Integration of expressive timing (timing profiles) in composition software
